

Smart Member Management Platform

See where every member comes from, grows and goes — with alerts, health scores and privacy built in by role.

Christy Tang (Team Leader) · Ansgar Yeung · Yu Tai · Hassan Muhammad

🔒 Demo runs on synthetic data — every name and number on screen is invented.

THE PROBLEM

150 members. One Excel file. It changes hands every January.

JCI_Victoria_Members_2026.xlsx														
	A	B	C	D	E	F	G	H	I	J	K	L	M	N

Dates of birth, phone numbers, employers, fee status, removal reasons — **all in one tab.**

Status is changed by overwriting the cell. **There is no history.**

Shared whole, by email, to whoever asks.

Four things break, and they all trace back to "One Year to Lead."

Knowledge dies at handover

Every post lasts one year. Context, reasoning and half-finished follow-ups do not transfer with the file.

There is no history

Nobody can reconstruct why a member left in 2024, or when a PM actually completed their requirement.

Tracking is manual

In our real data, **10 of 16 active Prospective Members** are already past their six-month deadline, and nobody acted.

Privacy cannot be controlled

A Chairman who needs three phone numbers receives everyone's date of birth. No record of who saw what.

JCI's design gives many members the chance to lead. It also resets the chapter's memory every twelve months. **That is the root cause.**

Five posts, five different needs, one spreadsheet.

POST	NEEDS TO...	GETS TODAY
 President	See chapter health at a glance	The whole file
 Membership Affairs (MAD / MAO) PRIMARY USER	Work the PM pipeline, run inductions	Maintains the whole file by hand
 Hon. Secretary & Finance Director	Keep contacts right, chase fees	A copy of the whole file
 Board / Chairman / SO	Reach their own team	The whole file, or nothing
 Ordinary member	Check their own record	Nothing
 The person who inherits this file next January is our most important user — and they are not in the room yet.		

THE SOLUTION

One live member record. Full history. Access granted by post, not by sending a file.

1

See the chapter's movement

Every join, induction, senior transfer and departure as a dated event with a reason — charted since 1965.

2

Catch people before they are lost

Seven alert rules and a 0–100 health score turn 150 rows into a short list for today.

3

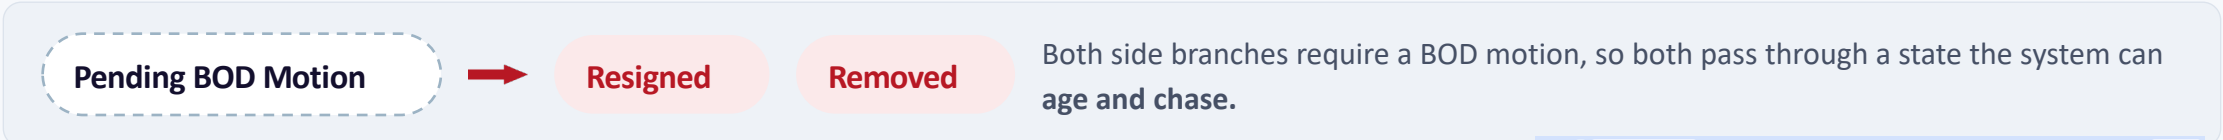

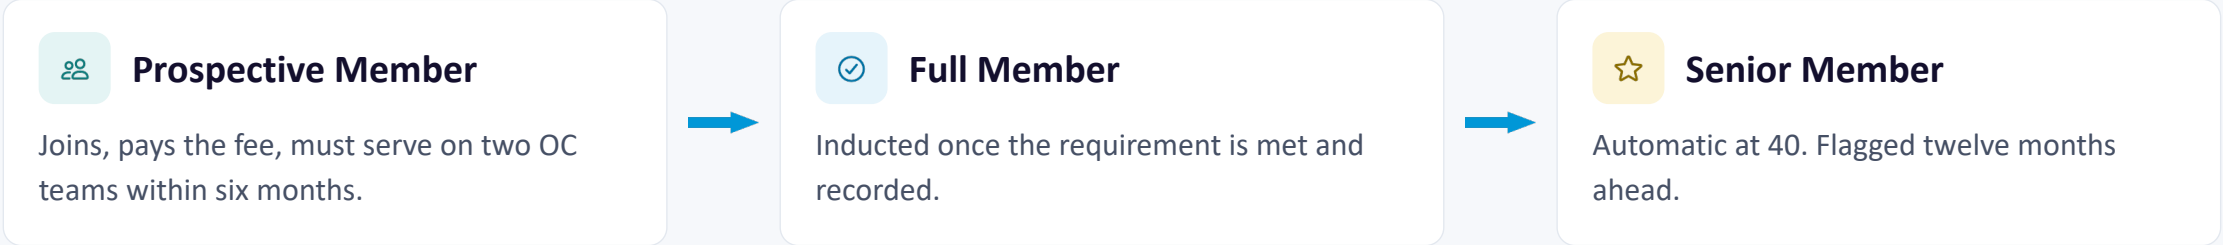

Everyone sees only what their post needs

The same record looks different to the President, the Finance Director, a Chairman and a member — and every look is logged.

Point three is the differentiator. It is the question a chapter asks before it trusts anyone with 150 dates of birth.

The product is built around the member journey JCI already defines.

Three screenshots of the JCI Victoria Member Management Platform interface are shown:

- Growth tree**: Displays a lineage of members, including roles on record, members who recruited, and longest line. It lists members like Wing Chun So, Jasper So, and others.
- Profile**: Shows details for a member named **Ulysses So**, including his profile, governance, and promotion history. It lists roles on record, dates of birth, and various milestones.
- Governance**: Displays board motions and recorded reasons, including roles on record, motion date, and status reason.

- Stored fields are facts. Everything else is computed.**
Age, requirement deadline, requirement status, project role, WhatsApp group and health score are never typed, so they are never stale.
- A member ID is never reused.**
Removed and resigned members keep their history, so the chapter can still answer why someone left in 2024.

For the first time, the chapter can see its own movement.

▼ Demonstration logins (8)

How access is decided

1 · YOUR ROLE RECORD

Every post you hold, exactly as the chapter records it — class, board post, project post, national post.

2 · THE HIGHEST ROLE WINS

A record reading **FM & MA** is an MA on this system, not a Full Member. The tier is the highest of the roles held, never the first one listed.

3 · THE TIER PICKS THE FIELDS

Fields outside your tier are dropped before the page is built. They are not hidden with styling — they are absent from the response.

Demonstration on synthetic member data. Contact details are generated, not real. Removed and resigned members keep their record but cannot sign in.

443 lifecycle events back to 1965, from a sheet that only ever showed today's snapshot.

Synthetic data

Smart Member Management Platform · JCI Victoria

07

The system knew about those ten overdue members three weeks before anyone did.

The same member. Three posts. Three different records.

President

sees everything

CAPTURE 3

Member detail, all tabs visible.

Chairman

4 groups hidden

CAPTURE 4

Same member. DOB masked, no Fees tab, no Governance.

The member

own record only

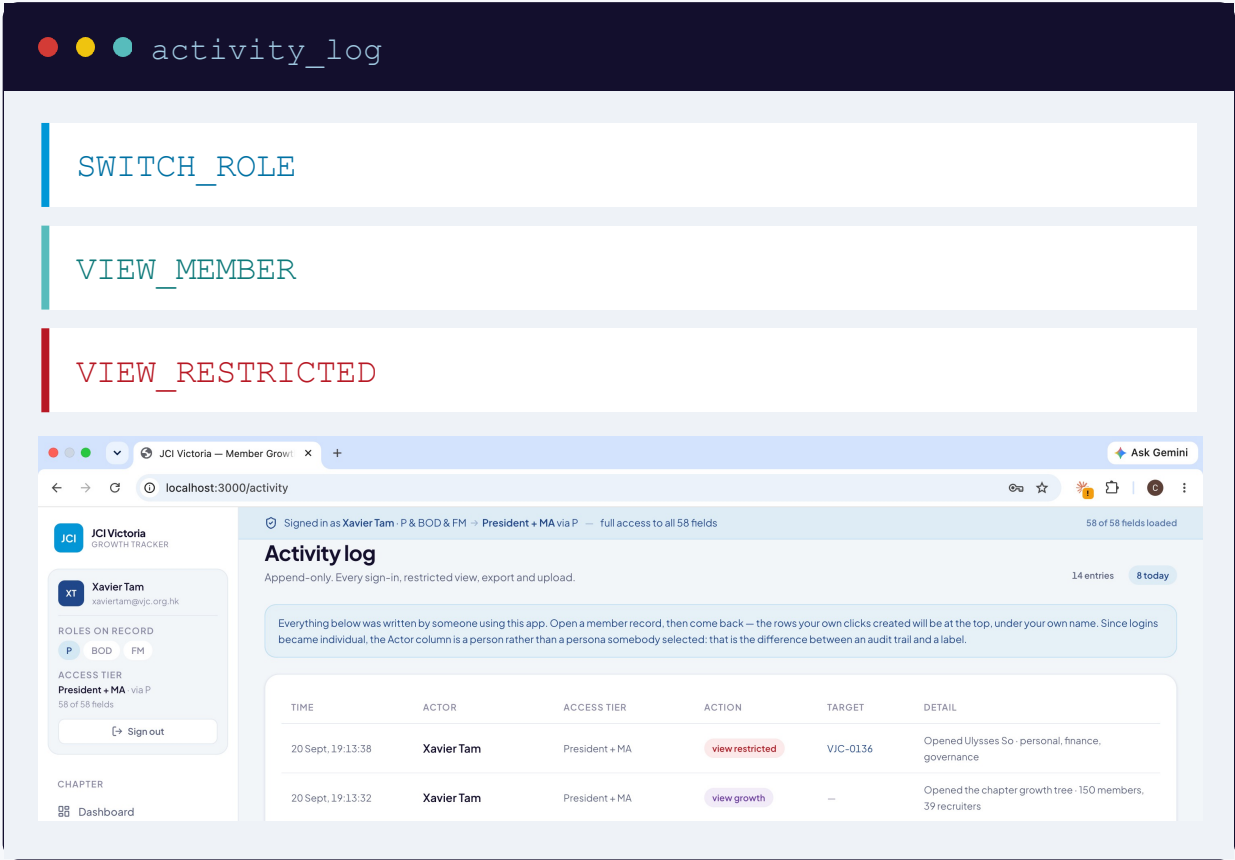

CAPTURE 5

Same member, signed in as themselves.

Field group	President + MA	HS + FD	Chairman / SO	Member (own)
Identity & contact	Full	Full (edit)	Masked mobile/email	Full (edit)
Personal (DOB, gender)	Full	Age band	Hidden	Full
Finance	Full	Full (edit)	Hidden	Own only
Governance (motions, reasons)	Full	Read	Hidden	Hidden

 Hidden fields never reach the browser. Each role gets its own pre-filtered file — the data is dropped before it is written, not hidden with CSS.

And every look is written down.

An append-only log

Views, edits, approvals and exports, with the actor's post recorded alongside their name. Nothing in it can be edited from the app.

Exports are watermarked

CSV export is role-filtered, stamped with who exported it and when, and logged. That is the answer to "people download the sheet and forward it."

Built in 24 hours on a stack a chapter can actually run.

COLUMNS VISIBLE FOR EACH ROLE

53 President	46 HS + FD	25 Chairman	1 Member — one row
--------------	------------	-------------	--------------------

All the logic is Python

It runs at build time. No API, no runtime database, nothing for a chapter to provision.

Derived, never stored

Deadlines, ages and scores are computed, so the data cannot go stale.

Filtered before it is written

Hidden fields are absent from the file, from the server render and from the browser.

Thresholds are config

Requirement rules, alert thresholds and score weights live in one place, per chapter.

Four capabilities the spreadsheet could never have.

Everyone signs in as themselves

A login page replaces the single shared account, so the system knows who is looking, not just what role is selected. The President and the Membership Affairs team can upload and update the member database directly from their own sign-in.

Permission follows the highest role held

Role and permission are now separate records. A member who holds more than one role is resolved to the highest, automatically — nobody maintains a second list.

Peter Lee FM + MA ➔ MA access

A growth tree for every member

The President opens any member and sees that person's whole promotion history in one view — the chapter's leadership pipeline, one member at a time.

The chapter can see itself ageing

The President and MA dashboard shows the average age of Full and Prospective Members as a circular diagram, read against the automatic transfer to Senior at 40. A chapter that can see its own succession curve can plan for it.

What we deliberately did not build, and when it lands.

Out of scope — by decision, not oversight

- × Real authentication
- × Any write to member data
- × Sending email or WhatsApp
- × Member self-service editing
- × Interest-matching engine
- × Multi-chapter tenancy
- × Mobile app

1

Stage 1 — Hackathon demo (now)

Read-only, seeded synthetic data, deployed to a public URL.

Done when a stranger can switch roles and see the difference without narration.

2

Stage 2 — Chapter pilot

Email magic-link login, edits with an approval queue, email and WhatsApp alerts, an import tool for any chapter's sheet, per-meeting attendance, retention policy.

Done when the MA team runs one month without the spreadsheet.

3

Stage 3 — Adoption and scale

Member self-service, interest and background matching for project recruitment, multi-chapter tenancy with an anonymised NOM dashboard, automated year-end handover pack.

Done when a second chapter runs it without us.

What changes for members, for the chapter, and for JCI.

Members

- A visible path to induction, with reminders before deadlines
- Invitations that match the interests they registered
- A planned move to Senior instead of quietly disappearing
- Confidence their data is seen only by those who need it

The chapter

- Membership Affairs shifts from maintaining a file to retaining people
- One screen answers how many joined, how many left, and why
- Chairmen get rosters without holding anyone's private data
- **Handover becomes a change of permissions, not a transfer of knowledge**

JCI

- Consistent conversion, time-to-induction and lapse figures across chapters
- Insight passed upward without personal data passed outward
- A credible data-protection answer a shared spreadsheet can never give

Metrics we will track: PM→FM conversion rate · median days to induction · annual lapse rate · at-risk members contacted within 14 days · share of profiles kept current.

Vision 2040 cannot be reached by recruitment alone.

 JCI has not been above its **1981 membership peak**. Vision 2040 targets **500,000 members**. The leak is retention, and today it is invisible.

This makes retention measurable: every movement in and out, with a reason and an owner.

It removes a structural cause of shrinkage — **knowledge lost at every One Year to Lead handover**. A chapter whose memory survives its leadership cycle builds on last year instead of restarting.

Supports the **Individual** area of opportunity by tracking each member's development from OC member to Chairman to Board.

THE JCI ACTIVE CITIZEN FRAMEWORK

Analyze
We audited our own chapter's sheet.

Develop
Data model, alert rules, privacy model.

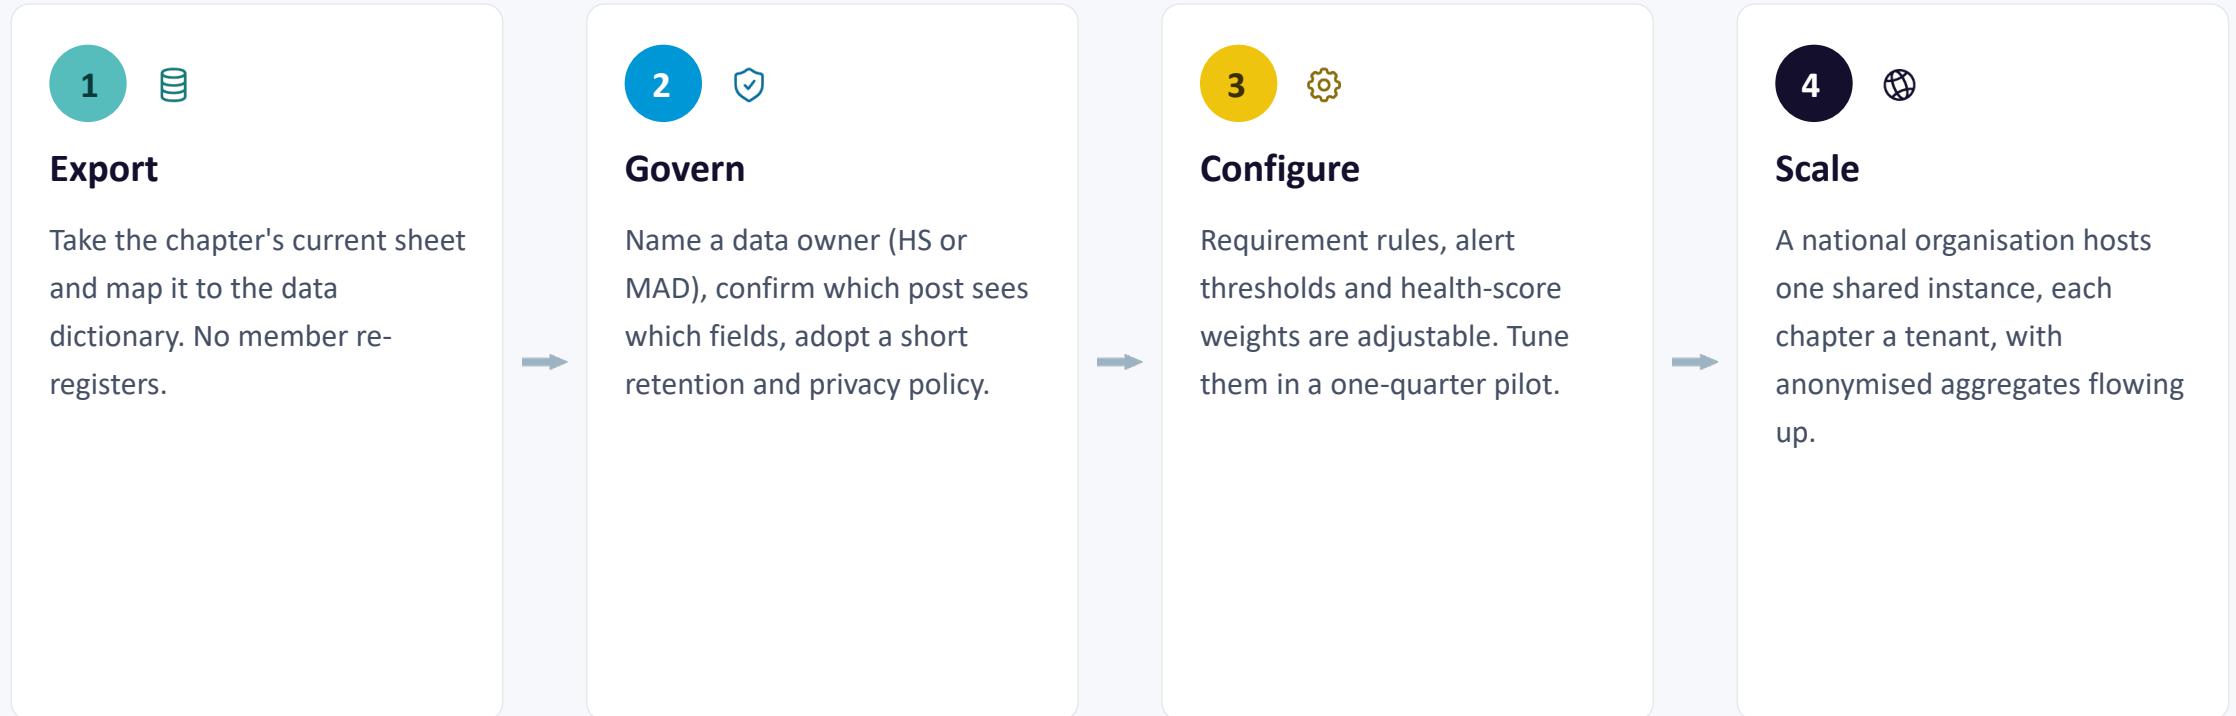

Execute
A daily action list for the officer who owns it.

Review
Logged actions and retention metrics feed the next board.

A chapter can adopt this in one quarter.

Access belongs to the post, not the person — so it transfers automatically at handover, and old access is revoked in one step.

One flagship project brought all four of us together.

AI Future Leaders — JCI Victoria's flagship programme. Every person on this stage arrived through it, by a different door.

2026 · WINNER

HM

Hassan Muhammad

Programme winner

Came in as a participant — and won
the competition.

A Director who chairs the programme, two members who joined and stayed to build it, and the student it brought in. **That is the pipeline from prospect to leader — and the one thing our chapter could never see until now.**

Live demo: [URL] · **Repo:** [URL]

Runs on synthetic data — every name and number on screen is invented.

The full permission matrix and the seven-table schema.

Field group	President / MA	HS / HT / FD	Chairman / SO	Member (own)
Identity	Full	Full	Full	Full
Contact	Full	Full (edit)	Masked mobile/email	Full (edit)
Personal	Full	Masked (age band)	Hidden	Full
Professional	Full	Read	Read	Full (edit)
Finance	Full	Full (edit)	Hidden	Own only
Governance	Full	Read	Hidden	Hidden
Analytics	Full	Finance alerts only	Hidden	Own score only

Masking is derived, not redacted

An age of 33 renders as **30–34**. A mobile renders as **+8529•••2925**. Never an empty cell — an empty cell looks like missing data, a lock looks like a policy.

Seven tables, 150 members

members · status_events · fee_records · oc_participation · projects · activity_log · demo_personas

Seeded with 443 status events, 409 fee records, 136 participation rows and 17 projects.

The demo walkthrough, for a judge reading the PDF.

Time	What is on screen	Screenshot to place
0:00	The real spreadsheet, blurred. "This is how 150 members are managed."	Capture 8 — blurred sheet
0:20	Dashboard: every join, induction, transfer and departure since 1965.	Capture 1 — dashboard as President
1:00	Alerts: ten PMs past deadline. The system knew three weeks ago.	Capture 2 — alerts grouped by rule
1:45	Member detail: health score and journey timeline, nothing overwritten.	Capture 3 — detail as President
2:15	The role switch: same member as Chairman. DOB, fees and motions gone.	Captures 4 and 5 — Chairman, then the member
3:05	Activity log: the rows those exact views just created.	Capture 6 — log straight after
3:30	Roadmap: what is next, and what a chapter needs to adopt it.	Capture 7 — export watermark

 Capture all eight at the same window width, with the **role banner visible in every product screenshot.**

 The recorded cut is **2:30** in the 8-minute slot. Trim the member-detail beat first, the dashboard beat second — never the role switch.
